LOS ANGELES--(BUSINESS WIRE)--Jan. 29, 1997--

SQL Financials First to Utilize FRx's New Version 5.0, Other
Technology Advances

SQL Financials International, Inc., the leading provider of world class applications with a breakthrough in time, and FRx Software today announced at SoftEx the release of FRx for Windows 5.0 and the signing of a worldwide agreement for SQL Financials to distribute the product to its customers. SQL Financials will be the first software vendor to distribute FRx for Windows Version 5.0, including the new FRx Application Server. It will also be the first to utilize FRx's new OLE interface technology to link FRx to its own General Ledger.

FRx for Windows, optimized for enterprise client/server networks, removes traditional barriers in financial reporting by combining an intuitive graphical user interface with extraordinary flexibility and processing speed. FRx's ability to consolidate data from multiple databases -- including Excel and Lotus spreadsheets -- into a single financial report with account and transaction drill down, will provide sophisticated financial information to SQL Financials users.

FRx for Windows Version 5.0 is the latest release of this industry-standard financial reporting product. Coupled with the FRx Application Server, this version will offer the following new features:

- Three-tier server-based report processing optimized for Microsoft Back Office.
- Report server and monitor to distribute reports across multiple workstations for true distributed processing capability.
- New Report Launcher to enable users to generate reports and select run-time variables without accessing the FRx row, column and reporting tree building blocks.
- Enhanced security to prevent unauthorized changes to FRx building blocks and limit users' access to authorized companies only.
- Enhanced FRx DrillDown Viewer, including e-mail enabled report distribution directly from the DrillDown Viewer.
- Several other enhancements and new Windows 95 look-and-feel.

In addition, SQL Financials is the first software vendor to use the FRx Open Financial Systems Interface (OFSI) to connect FRx to SQL Financials databases. This interface is based upon OLE technology and permits FRx to directly access SQL Financials data rather than using a data warehouse approach requiring transfer of data to a separate database. This interface technology will also enable SQL Financials to independently develop additional techniques and methods to expand the functionality of FRx for Windows for SQL Financials users.

"FRx is very excited to announce this relationship with SQL Financials, which is considered by many industry analysts to be one of the elite providers of client server financial applications," said Michael Rohan, president and founder of FRx. "We are particularly impressed with the openness and enthusiasm of SQL Financials for our new technologies and its efforts in developing the OLE interface between our products."

"We partnered with FRx because it is one of the premier providers of

financial reporting solutions. By integrating FRx for Windows 5.0 with our General Ledger, we can provide enhanced distributed management reporting to our customers," said Steve Jeffery, president of SQL Financials. "Now, users will be able to obtain electronic copies of their management reports with drill down analysis regardless of where they are located. In addition, the OLE Server gives us the ability to expand FRx's functionality, provides our users with a reporting solution that can be quickly implemented, and offers them timely access to their financial data."

FRx for Windows will be available through SQL Financials in the first quarter of 1997 beginning at \$10,000.

Founded in 1991, SQL Financials International, Inc. develops and supports world class applications that offer a breakthrough in time on a variety of scalable platforms for Fortune 1000 companies. SQL Financials offers General Ledger, Accounts Payable, Accounts Receivable, Revenue Accounting, Fixed Assets, Financial Statement Accelerator, Document Manager and Task Manager applications and is in the process of developing a complete suite of application software. Headquartered in Atlanta, the company provides software and services to major corporations, including Ameritech; Amtrak; CompUSA; Freddie Mac; Oppenheimer Capital; Sara Lee Corporation, T. Rowe Price, Toronto Dominion Bank; and United Technologies Corporation. SQL Financials' Web site is located at <http://www.sqlfinancials.com>.

FRx Software Corporation is a privately-held company that develops, supports and markets its enterprise financial reporting applications. Since its initial product release in 1990, FRx has been installed in over 8,000 sites worldwide. FRx is based in Denver with regional offices in San Francisco, Chicago and Newport Beach. FRx's homepage can be found at <http://www.frxsoft.com>.

Throughout this release, software and hardware products are mentioned by name. In most, if not all, cases, these product names are claimed as trademarks by the companies that manufacture the products. It is not our intention to claim these names or trademarks as our own.
